

Uijin Cho

San Francisco Bay Area, CA | (669) 236 – 7016 | uijin_cho@brown.edu | uijincho.com

EDUCATION

Brown University – GPA: 4.0/4.0

Providence, RI

Sc.B. Computer Science & Applied Mathematics

Expected Graduation: May 2029

- **Relevant Coursework:** Linear Algebra & Multivariable Calculus, Ordinary Differential Equations, Probability & Statistics, Introduction to Computer Science, Discrete Structures & Probability, Fundamentals of Computer Systems, Machine Learning
- **Notable Extracurriculars:** Hack@Brown, Women in Computer Science, Brown Daily Herald, Badminton Team

SKILLS

Languages: Python, C/C++, Pyret, JavaScript, SQL, HTML/CSS

Frameworks & Technologies: Numpy, Pandas, Matplotlib, TensorFlow, Git/GitHub, Node.js, Linux, Docker, Jira, Vercel

Professional & Leadership Affiliations: National Center for Women & Information Technology, Rewriting the Code

EXPERIENCE

GoDaddy

Tempe, AZ

Incoming Software Engineer Intern

Summer 2026

Brown Daily Herald

Providence, RI

Data Analyst

Jan 2026 – Present

- Analyzed 10 years of course records (70K+ entries) to identify trends in most-enrolled professors and classes for data journalism
- Built Jupyter Notebook pipelines for data cleaning, modeling, and visualization to support reporting and editorial decisions
- Produced visualizations for the campus poll, highlighting employment by class year and approval ratings of key campus services

Robolabs

San Jose, CA

Engineer & Robotics Coach

Mar 2024 – Aug 2025

- Engineered a PID system in C++ for VEX Robotics to enhance drive motor precision and stability through real-time signal tuning
- Authored a modular open-source C++ curriculum deployed to 3K students, integrating algorithms and robotics fundamentals
- Instructed 50 students in robotics, mathematics, and programming, developing learning tracks to each individual student

LEADERSHIP

Hack@Brown

Providence, RI

Hackathon Co-Director

Feb 2026 – Present

- Lead a multifunctional team of 40 students for Hack@Brown 2027, an event with 500 participants and \$50K+ in funding
- Created an initiative to launch the only collegiate-organized high school hackathon for 100 Rhode Island students

Experience Organizer

Aug 2025 – Feb 2026

- Lead participant analytics, using quantitative insights to allocate 62 teams to judging assignments and enhance student satisfaction
- Established corporate partnerships with Ekotrope, Motional, MBTA, Jellyfish, and more through targeted outreach efforts

Blu's Hacks

San Jose, CA

Hackathon Director

Aug 2023 – Mar 2025

- Directed a large-scale student hackathon fostering innovation in design, entrepreneurship, and technical problem solving
- Negotiated \$36K in sponsorships, securing partnerships with corporate and nonprofit stakeholders across the Bay Area, CA
- Expanded student participation by 25%, driving inclusive access to computational and quantitative skill development

PROJECTS

“A look into the most popular courses at Brown” (Published in the Brown Daily Herald) | Pandas, Jupyter, Datawrapper

- Examined course registration data over 10 academic years (72,800+ data points), finding the most popular courses and professors
- Investigated course prerequisites by modeling course dependencies as a directed graph, identifying circular dependency chains

perennial: Symptom & Pain Tracker for Chronic Diseases (YHack 2026 Winner) | Android, Kotlin, Firebase, PyTorch

- Engineered a cross-platform Android & WearOS app in Kotlin with Firebase Auth/Storage for seamless symptom logging
- Designed a custom ML-driven "day score" trained on 18,756+ of data to generate actionable insights via an interactive calendar

Monsoon & Air Quality Analysis in Seoul, SK (Presented at BrownU DIVE Symposium) | Pandas, Matplotlib, Seaborn

- Designed and executed quantitative study analyzing monsoon impacts on air quality in Seoul, South Korea, processing 30 years of hourly environmental measurements across 5 pollutants and precipitation data (54,750+ data points)
- Discovered 50.7% increase in cumulative pollutant exposure through identification of temporal shifts in pollutant peaks
